

Where – a new software for geodetic analysis

Where is currently being developed by the Norwegian Mapping Authority (Kartverket). Where is written in Python, and is taking advantage of well-tested code like the SOFA and IERS libraries. The architecture is easily maintainable and extendable. Python makes it easy to write, and utilizes external libraries written in faster languages.

Where is released as an open source project on GitHub. The aim is to become analysis center for IVS and for ILRS.
