

CRD Format Implementation

- Currently, there are 30 stations validated, and 5 awaiting validation; 7 have not been heard from
- ILRS status page now shows only stations NOT validated
- All ILRS analysis centers are able to use CRD data
- Final transition date has been delayed several times since June 2008 due to lack of stations and transitions at the OCs. Currently, it is TBD. Data from un-validated stations will be forward converted.
- Some stations have format-compliance issues
- Concern about stations' shortcut to CRD validation

Other data flow issues

- Both EDC and CDDIS can now quarantine data from new and upgraded stations while the AWG checks it for any problems.
- Be sure to let the ILRS CB know when your stations has made upgrades.
